Séché Group

A world of solutions

Purification and regeneration of chemical products

Highly technical processes for circular economy

For over 50 years, thanks to its subsidiaries Speichim Processing and Trédi, Séché Group has developed innovative techniques to offer an opportunity for the industrial actors (chemistry, petrochemistry, pharmacy) to recover their hazardous waste and chemical products

Our teams are at your service

Tour Maine Montparnasse - BP 125
 33 avenue du Maine - 75755 Paris Cedex 15

Séché's expertise

- Regeneration of industrial solvents
- Purification of synthesis intermediates
- Solvents trading
- Bromine recovery

Creation: studioversion2.com - Pric: François Vignaud, Bertrand Bouffat - Eric Nocher - 2019 - Printed on PEFC paper from sustainably managed forests.

Regeneration of solvents

A waste management solution

Customised processing produces new-solvent characteristics at competitive prices using a range of industrial processes. And our eco-friendly approach is economical in terms of raw material consumption. The regenerated solvent goes back into the process for further industrial use.

High dry-extract solvents are bleached in our vacuum coating unit and, where applicable, separated in a distillation column.

Low dry-extract solvents are distilled under atmospheric pressure.

Purification of synthesis intermediates

A technical ad hoc service

As a key partner to the pharmaceutical, perfume, petro-agrochemical and fine chemical industries, Séché Group provides know-how and expertise in the separation of chemical products.

Responding to customer needs

- R & D lab
- Pilot tests
- Bespoke packaging
- Technical partnerships
- Logistics
- Transport
- Safety advice
- Expertise
- Consulting
- Assistance in customs formalities
- Cross-border waste consultancy

Solvents trading

In addition to our custom work, we provide the following services:

Collection of residual solvents

from manufacturers at the end of their useful life.

Sale of solvents

After processing in-house, solvents are sold to customers who use regenerated solvents.

Solvents trading provides a real cost saving solution (lower cost compared to new solvent prices) which is also eco-friendly (optimised processing) to solve your waste management problems.

A resolutely EHSS approach

- ISO 9001 certified
- GMP (Good Manufacturing Practices) approach to satisfy high quality standards required by the pharmaceutical industry
- Quality management system
- Safety management system
- Environmental management system

Bromine recovery

Séché Group has developed an innovative technology in order to extract and recover bromine from waste brines. The quality of bromine purified via a thermal dedicated process enables to use it as raw material by the Fine Chemical Industry.
